CONTROL PANELS

Honeywell Pro-Watch Professional Starter Kit

Porwatch Professional Starter Kit

Overview

The PW–Series Modular Control System is an advanced access control hardware architecture capable of providing solutions for large enterprise applications. The Intelligent Controller provides power and flexibility with its 32-bit architecture, TCP/IP support, flash memory, large local cardholder database, and large reader and I/O module support.

The Intelligent Controller is designed to operate off-line, making access control decisions independently from a PC or other controlling device. It can also be connected to a host computer for system configuration, alarm monitoring and direct control. Connectivity to the host computer is accomplished via direct serial communication (RS232 or RS485), dialup modem, or TCP/IP network connection. The PW-6000 has Ethernet directly embedded and will support a second Ethernet connection. The PW–Series Intelligent Controllers support a combination of I/O and/or reader boards to monitor alarm input points, relay output points and access control reader interfaces. By offering a modular design, the system can be tailored to meet a wide range of applications, while optimizing cost and mounting space.

Features & Benefits:

- Up to 12 intervals per time zone where each interval is a start time, stop time and day map. The day map indicates the day of the week or holiday
- 255 possible holidays are defined by a starting date and duration
- Automatic calculation of leap year and Daylight Saving Time
- Support for FIPS long card numbers
- Activation and deactivation dates by card
